

Style Reference

Every visual element in one document

Reference document only — the text throughout is placeholder, not lesson content. Its purpose is to catalogue the formatting patterns available for Grounded AI Practice documents in one place.

Everything on the following pages is built from the same six-tone palette, the same Public Sans type system, and a handful of reusable constructions — a title block, a labelled section heading, a card, a table, a list. Once a pattern is established here, reusing it in real content is a copy-and-relabel job, not a redesign.

Text hierarchy

Every specimen below is rendered in its actual Word style, not just described — apply the named style from the Word Styles pane and this is what you get.

This is Title style

Public Sans Bold, 28pt, Ink — one per document

This is Subtitle style

Public Sans Bold, 15pt, Ember — sits directly under the title

This is Heading 1 style

Public Sans Bold, 13pt, Ink, Sage rule beneath — top-level section; the icon is added by hand, not part of the style

This is Heading 2 style

Public Sans Bold, 12pt, Ink — subsection within a Heading 1

This is Heading 3 style

Public Sans Bold, 11pt, Graphite — third-level heading, used sparingly

This is Body text (Normal style)

Public Sans Regular, 10.5pt, Ink — the document default

This is Caption style

Public Sans Italic, 8.5pt, Stone — figure captions, asides, this line itself

Heading1/2/3 carry a real Word outline level, so Insert → Table of Contents and the Navigation pane both work against them without extra setup.

Pull quotes

A short, indented statement pulled out from body text, with a pill-shaped Ember bar on the left — built the same way as a callout card (a Word group of a bar shape and a text box), just without the icon well or background card.

“If it is not in the prompt or the visible context, the model does not have it.”

— Quote style: 12pt italic Ink; attribution in Caption style

Callout cards

One shared construction — rounded background card, white icon well, pill-shaped colour divider, text block — built as a single Word group so it survives copy-paste as one object. The icon well is a fixed size for a given size preset; only the text column resizes, so the icon is never stretched or squeezed.

Semantic types

NOTE
Neutral, informational aside. Sage background, Stone divider and label. Medium preset.

TIP
Suggested action for the reader to try. Sand background, Ember divider and label.

WARNING
Common mistake
Flags a frequent error. Mist background, Graphite divider and label. Large preset — same icon well as medium, extra height for a heading line.

CHECK
A new type built from the same card, reusing NOTE's colours with a different icon and label.

New types are built by swapping the icon, label and body text inside the shared construction above — not by inventing new colours. CHECK reuses NOTE's Sage/Stone pairing on purpose; the full 36-icon set is available for further types in the same style.

Size presets

Small, medium and large presets change the icon-well size and available text height for the amount of content a card needs to carry. Width is independent of preset — set it to whatever the text needs.

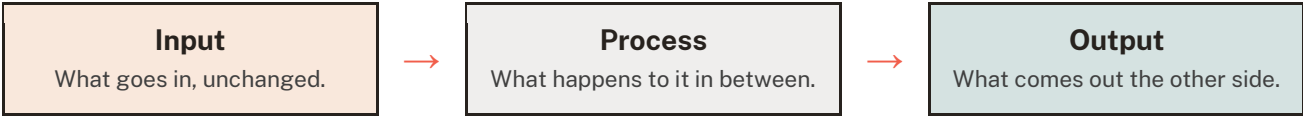

NOTE
Small preset — compact icon well, one line of text, narrower card.

 Tables

Flow table

A three-step flow, each stage shaded a different tint with an Ember arrow between:

Comparison table

A two-column comparison, dark header row and alternating row tints:

Option A	Option B
First row, left column.	First row, right column.
Second row, left column.	Second row, right column.

Compact reference table

A narrower key/value type, no shading, just a thin Sage rule under each row — for short specs rather than side-by-side comparison. This table is, in fact, describing itself:

Page size	A4, 1080-twip margins
Body font	Public Sans Regular, 10.5pt
Accent colour	Ember #F15E4B
Line spacing	264% (auto)

Dash list

The existing pattern for a short set of outcomes or takeaways, manually indented rather than a native Word list:

- First point, styled with an Ember dash.
- Second point, same treatment.
- Third point, same treatment.

Native bulleted list

A real Word list style, so it rennumbers and reflows correctly if items are added or removed:

- First bulleted item.
- Second bulleted item.
- Third bulleted item.

Native numbered list

The same mechanism, for ordered steps:

1. Read the prompt back before sending it.
2. Check who the answer is for.
3. Check what length and tone it should have.

 Images and figures

A standalone figure, centred, with a caption below it — here, one of the 36 approved content icons used at illustration size rather than inline:

Figure — a content icon used as a standalone illustration, not inline with text.

 Colour palette

The eight colours everything above is built from. Paper carries a thin Ink border here so it stays visible against the page.

Ink #27221E	Ember #F15E4B	Sand #F9E8DC	Paper #F9F9F9
Mist #EFEED	Sage #D5E2E1	Stone #6E6E6E	Graphite #404040

End of style reference.
